## Benefits of BAUX Acoustic Wood Wool

BAUX Acoustic Wood Wool has all the ingredients for excellent acoustic design—performance, sustainability and a full palette of shapes and colours to play with. BAUX Acoustic Wood Wool assortment is carefully designed by Form Us With Love.

## Unpacking and handling

Please handle BAUX products with care during unpacking and installation. Be sure to inspect materials upon delivery and note any damages on the delivery and notify BAUX immediately. Before installation, be sure to unwrap the packaging and let the products acclimatize at least 48 hours where the installation will take place. Let the products stay stacked.

## Installation

BAUX Acoustic Wood Wool can be installed on both ceilings and walls using a variety of different installation methods, including the use of glue, screws and magnets. Suitable for projects of all kinds, Acoustic Wood Wool panels fulfil a range of acoustic treatment needs—from A to D class, and NRC requirements up to 0.95. Download the installation manuals at [baux.com](http://baux.com).

## Shape modification

BAUX Wood Wool products can easily be cut to shape with a Hand Saw, Circular Saw or equal. The color does not run through the material so visible edges need touch up paint.

## Repairs and field painting

Minor damages on the surface usually have little impact on the visual appearance since the boards have the same structure throughout the entire product. Field painting is possible using a long-haired paint roller or a hand sprayer. Water-based paint will not reduce the sound-absorbing performance of the panels. For larger paint work, use spray equipment with water-based paint and apply thin layers (approximately 0,4 liters/m<sup>2</sup>).

## Use and maintenance

BAUX products do not require subsequent care. However, we recommend light cleaning using a vacuum cleaner with a brush nozzle. Should vacuum-cleaning prove insufficient, you can wipe the panels using a lightly damp cloth. Cleaning liquids may be used. In cases of heavy soiling, light cleaning with hot steam is proposed.

## Reuse, recycling and deposition

Boards that have been disassembled in connection with renovation or demolition may be reused. Wood wool boards may be ground down and recycled as ballast and filling material, moisture absorbent sprinkling, substrate for running tracks etc.

If wood wool material is deposited in nature, no negative environmental impact arises, on the contrary it adds a calcium supplement. The composted product return safely to nature as a soil conditioner. The cement in the product boosts oxygen levels during the composting process and CO<sub>2</sub> from the air binds to the cement particles, calcium is formed (carbonation). The wood adds organic material to the compost.

## Tolerances

BAUX acoustic Wood Wool is a natural material and the composition will incur small variations in the panels. Inappropriate storage and lack of acclimatisation could alter panel dimension and weight.

# Compositions of Ingredients

**About:** BAUX Acoustic Wood Wool is a functional, natural material made from two of the world's oldest building materials, wood and cement. The combination is simple and ingenious. Wood fiber offers excellent insulation, heat retention and sound absorption. Cement, a proven and popular building material, is the binder that provides strength, moisture resistance and fire protection. Therefore, BAUX acoustic products are versatile and durable in all climates.

<b>Compositions of Material:</b>	Ingredient:	Share (%):	Function:	Origin:	Supplier:	Certificates/other:
	Portland cement CAS: 65997-15-1	48%	Binder	SE & DK (20%/80%)	Cementa	
	Wood swedish fir	35%	Sound absorber. Visual look	Sweden (SE)	Own forest	FSC & PEFC
	Limestone powder CAS: 471-34-1	17%	Binder	Sweden (SE)	Nordkalk	
	Paint, water based	<1%	Visual look	Finland (FI)	Teknos	Group M1, The Swan

## Sustainable materials and CO<sub>2</sub> carbonation

**Materials and CO<sub>2</sub> carbonation:** BAUX wood fibers are certified – FSC® and PEFC™ – guaranteeing that it can be traced back to responsible forestry operations. The wood is collected from the swedish forest in the direct surrounding of the factory in order to minimize negative CO<sub>2</sub> emissions caused by longer transport distances.

BAUX have carefully selected the world leading cement supplier in terms of sustainability. An advanced system for Carbon Dioxide Capturing is in place ensuring that CO<sub>2</sub> emissions from the manufacturing limestone heating process is absorbed and re-captured in porous stone materials. Once installed, BAUX Acoustic Wood Wool panels also capture CO<sub>2</sub> from the surrounding air in a reactive process called carbonation. The limestone in the cement reverts back to its original state when CO<sub>2</sub> is collected. Independent tests show that BAUX Acoustic Wood Wool, thanks to its open material structure, is able to carbonate as much as 70% of the CO<sub>2</sub> that was emitted during the manufacturing process.

# Certificates and Standards

**Production:** Production locations: Raw material: Sweden. Finishing: Sweden, USA, Australia.  
 Waste in production: 80% of waste (wood wool) from production is used to heat the factory drying and wplant. No waste is produced from the timber log.

# Acoustic Performance

Absorption Coefficient\*

\*An absorption coefficient is one of the key efficiency markers for acoustic materials, showing how much sound is absorbed at different frequencies. In the absorption spectrum, 0 indicates perfect reflection, and 1 indicates perfect absorption. Which one is ideal? It really depends on the kind of acoustic landscape you are aiming to build. While some spaces require maximum tranquility, in others, a bit more bustle and ambience may be desired. Our assortment addresses a range of absorption needs to help you achieve your goals.
